

# Pyramid 2015

A **pyramid** is a polyhedron having a polygon as one face (usually known as the base) and all the other faces are triangles which meet at a common point known as the apex. In this case the base is a square. Also, the apex is on the line of symmetry which passes vertically through the centre of the base, so its full description is a **right square-based pyramid**.

### To make

- Cut out along all the 'solid' lines.
- Score and crease along the 'broken' lines.
- Fold it up into position (without glue) so as to get an idea of how it will look.
- Glue the tabs in the order they are numbered.
